

IDRON SERIES

Water-Soluble Drip Fertilizers

The IDRON product range is a series designed for fertilizing seedlings, saplings, and all plants with special nutritional requirements.

K-Adriatica's ongoing research to develop its own formulations has led to the creation of a special element blend called MiX K, which is incorporated during the formulation process to produce fertigation products with enhanced properties and effectiveness.

The addition of MiX K increases solubility, reduces pH and conductivity. All these features ensure efficient fertilization without sediment formation and consequently prevent clogging of drip irrigation lines.

PRODUCT	CONTENTS							
	Total N	Nitrate N	Ammonium N	Urea N	P2O5	K2O	MgO	CaO
IDRON 9-50-9 +2Mg+ME	9	1	8		50	9	2	
IDRON 18-18-18 +ME	18	9,5	8,5		18	18		
IDRON 10-5-23 +2Mg+8CaO+ME	10	10			5	23	2	8
IDRON 10-5-40 +2Mg +ME	10	7,8		2,2	5	40	2	

Method of use

Fertigation

- The entire IDRON product series consists of fertilizers with low pH (<4).
- They are 100% soluble and chlorine-free fertilizers.
- It is recommended to use them at a dosage of 3–5 kg per decare during the periods required by all plants.
