

K-SOL SERIES

Water-Soluble Drip Fertilizers

The K-SOL SERIES is formulated with the most suitable combinations of elements to meet growers' harvest expectations. It features high water solubility and a wide range of products.

All micronutrients are present in fully chelated form, effectively contributing to the prevention and correction of physiological disorders caused by micronutrient deficiencies.

K-SOL 10-50-0 +5Mg +ME	10		10		50		5		

Method of use

Fertigation

- The entire K-SOL product series consists of fertilizers with low pH values (4.45–6.19).
- They are 100% soluble and chlorine-free fertilizers.
- It is recommended to use them at a dosage of 2.5–5 kg per decare during the periods required by all plants.
